

ABSTRACT OF THE DISCLOSURE

- A console switch selectively connects a terminal to a port of an information processing device that has a plural number of ports connected through a network.
- 5 This console switch includes: a first unit that obtains port information from the terminal, the port information specifying the port; and a second unit that refers to a predetermined database in accordance with the port information obtained by the first unit, and
- 10 establishes a connection path between the terminal and the port of the information processing device.
